

iPad testing setup

—to make it a smoother ride!

on an iPad i recommend using Safari as the browser. To make sure all things go as planned, please check the following settings (tech dept will have tried to correct all issues beforehand, but i regularly find people have readjusted the settings to suit themselves):

Select “Settings”

Scroll down on the left and select “Safari”

turn “Block Pop-Ups” off

Continue scrolling down on the right side and get to the “Page Zoom” and Request Desktop Website” options

after selecting the "Page Zoom" option, then choose 100% size

then after selecting the "All Websites" option (from the previous "safari" options pane) proceed to select the "all Websites" toggle option

turn the "All Websites" option off

now, if you type the "test.mapnwea.org" site in, you might get the following: if so, just select "allow" and go on

you will come to this!
